
Patient: DOE, JOHN (M)	Exam Date: 12/27/2013
MRN : JD1004	DOB: 07/08/1987
Location :	Room:
Referring Physician: XMRI, SECOND OPINION	FAX: 888-886-2486

CR OF THE LUMBOSACRAL 2 OR 3 VIEWS

CLINICAL HISTORY: Back pain.

COMMENTS:

Standard views show no fracture.

Grade 1 anterolisthesis of L4 on L5 is noted. Alignment is otherwise preserved.

Mild levoscoliosis is present, apex at L3.

Moderate to severe multilevel degenerative changes are seen, demonstrated by marked osteophytosis, loss of disk space heights and end-plate sclerosis. L4-L5 level and L5-S1 levels are most effected.

No evidence of lytic or blastic lesion. The pedicles are intact.

Soft tissue structures are intact.

IMPRESSION:

1. Mild levoscoliosis is present, apex at L3.
2. Moderate to severe multilevel degenerative changes.
3. Grade 1 anterolisthesis of L4 on L5
4. Consider follow up with MRI if clinically warranted.
